

Immune Study on Astaxanthin

Astaxanthin supports healthy immune function.

A double blind placebo controlled human clinical showed that astaxanthin is a strong immune system stimulator. The study showed that Astaxanthin: 1) stimulates lymphocyte proliferation, 2) increases the total number of antibody producing B-cells, 3) produces increased number of T-cells, 4) amplifies natural killer cell cytotoxic activity, 5) significantly increases delayed-type hypersensitivity response and 6) dramatically decreases DNA damage.
